Lo-Fi UI Kit

120+ components, dark and light, auto-layout everywhere. This guide covers how the kit is organized and how to ship your next app faster with it.

What’s inside

- Foundations: color tokens, type scale, spacing, radius.
- Components: buttons, inputs, cards, tables, nav, modals.
- Patterns: auth, dashboard, checkout, settings.
- Both themes, every component, fully auto-layout.

02

Use the tokens

Everything is driven by variables. Change a token once and the whole kit updates. Map the tokens to your code (CSS variables, Tailwind config, or design tokens) and design and build stay in sync.

> *Design systems aren’t about rules. They’re about never making the same decision twice.*
